

V7 NATIVE QUALIFICATION

Experimental layer-prependig installer + parity-gated C recurrence

GO

The frozen v7 run was admitted and independently resolved by ilxyr as **accepted**. It preserved reference behavior and qualified the native C GDN recurrence on AWS with no fallback.

Behavioral parity

Held-out perplexity - lower is better

7.9062

32 GiB merits a measured follow-up.

Acceptance gates

Every preregistered correctness gate passed

✓ 4,096 tokens
Full paired evaluation

✓ Logit parity
Relative error 6.79e-7

✓ Statistical gate
Upper bound 0 nats

✓ Checkpoint reload
leCore + Transformers

✓ Text generation
Official runtime path

✓ Vision input
Official smoke test

Native C qualified

Both evaluators used the **native C GDN recurrence** and passed fresh plus resumed-state parity. Across 380 calls, no fallback or direct NumPy recurrence was recorded.

156,484 native recurrent tokens
